Unit 1 – Reflections

This reflection will summarise what I learned in this first unit. Far from learning fascinating and valuable articles about computer professionals' roles and responsibilities, as well as the challenges and threats that computer professionals face these days, I have become aware of the General Data Protection Regulation (GDPR)'s scope and purpose, as well as how to apply those rules in my roles as a computer professional. One of the most exciting lessons I have learned was about people's rights to control how their data is collected, where and how it is used, and the options to control the collected data.

This first unit required me to devote all of my efforts to it because I needed to organise my time to read, investigate how to manage GitHub, build my e-portfolio, take notes, and attend the seminars, all while feeding myself with information; this is where I referred to the challenging course. However, it was all worthwhile because I learned about time management and improved my organisational skills.

The Computer as a Professional lecture cast was a great starting point because it helped formulate my ideas and steps to follow my study plan.
