

Tutor's feedback:**Outcome:** 63 % (Merit)**Graded by** Dr Oliver Buckley**Feedback comments:**

The code is nicely laid out and presented in line with the Python standards. You have demonstrated a good understanding of the object oriented approaches and used the various techniques appropriately.

The comments on the code are a little sparse, remember we talked about commenting as to why you did things, not what you did. At the moment the codes only really give a brief overview of what the functions do. It is important to explain why you made certain choices as it helps you in the future or helps other developers.

There is a lack of testing within the submission, we talked about the importance of testing in several of the seminars. It is valuable to be able to see that your code is working as you expect and that any changes you might make do not break existing functionality.

Overall a reasonable attempt that demonstrates your skills and knowledge but is lacking in some key areas.
