

Unit 9 – Reflection:

I actively participated in a 'Collaborative Discussion 2: Cryptography case study: TrueCrypt' in this week's studies. I found myself engaged in answering my colleague's posts, and in doing so, I had to conduct thorough research to provide a well-informed perspective. Among the various positions, Sebastien's stood out the most as it shed light on the evolving threat landscape and the lack of continued support for TrueCrypt. This was an eye-opener for me as it made me realise the importance of adopting more contemporary encryption technologies. This discussion helped me broaden my knowledge and understanding of cryptography and its matter in security risks.
