Unit 10 – Reflection:

As I reflect on the studies from this week, I can't help but acknowledge the challenges I faced with the exercise on Python code quality. Managing my time and juggling two modules proved to be quite demanding, and I must admit that I lost track of my studies at times, especially when I had to submit a review for another module. Nevertheless, my fascination with Python continues to drive me, as I am eager to enhance my skills in this area.

The activity on "Using Linters to Achieve Python Code Quality" was particularly intriguing, and I found great enjoyment in completing this exercise. Despite the difficulty I encountered in the past when it came to referencing, I managed to locate academic articles related to the topic. This process was challenging, but I ultimately succeeded in finding and learning from these valuable literature sources.
